Subject: Microsoft Settlement

To whomever it concerns:

I believe the proposed settlement with Microsoft is a joke. They were proven guilty and they only given a slap on a wrist. Microsoft needs to unbundle all non OS related programs from its operating systems. They only bundle software in order to take over the market share and make their monopoly stronger. If they truly cared about the customer they would bundle Office into the operating system but that would affect their revenue on a product that they have already a monopoly in. I believe the penalties for Microsoft should be much stiffer.

Thanks for listening
